

Guyana recent-change monitoring pack

A live-curated example showing freshness and follow-up pressure across selected official Guyana mining sources.

Country: Guyana (GUY) - Generated: 2026-10-25T04:01:03.263447939Z

Latest source update: 24 Oct 2026, 19:56 UTC

Screening position

4 curated sources have recorded changes in the last seven days; 4 require follow-up before affected findings are treated as current.

Three material findings

- 4 curated official source surfaces passed the current publication freshness gate.
- 4 source changes were recorded within the previous seven days.
- 4 sources carry review or re-ingestion follow-up rather than a clear monitor-only state.

GYEITI extractive sector data page - Live Source Ingestion - checked 23 Oct 2026,

19:54 UTC - eiti.gy

GGMC official publications and notices - Live Source Ingestion - checked 23 Oct 2026,

19:54 UTC - ggmc.gov.gy

Principal limitations

- A detected webpage change does not by itself mean a licence, holder, law, or project status changed.
- The pack covers a curated source set, not every Guyana publication or authority system.

Recommended next checks

- Open each changed citation and confirm the substantive difference.
- Regenerate affected customer reports after relevant evidence has been reviewed.
- Verify time-sensitive conclusions against the responsible authority.

Report-use limitations

Automated screening based on available cited sources; not analyst verification, legal advice, ownership confirmation, a cadastral determination, an environmental compliance finding, or investment advice.

Named parties are shown from cited public records. They are not customers, testimonials or endorsements.

- GeoMine Intel reports are automated screening products assembled from the cited sources and approved spatial datasets available at generation time.
- Recorded applicants, holders, transferees, previous parties, and unresolved relationships must be interpreted according to the stated relationship classification; no ownership conclusion is implied.
- Mapped boundaries and modelled environmental datasets are suitable for screening only and are not cadastral surveys, legal boundaries, field observations, or compliance determinations.
- Source records may be incomplete, delayed, changed, superseded, or unavailable. GeoMine Intel does not guarantee completeness, accuracy, continued availability, or fitness for a particular decision.
- Customers should verify material findings with the responsible authority and obtain appropriate legal, technical, environmental, financial, or investment advice.
